

Polycarbodiimide crosslinker

1,3-bis(1-carbodiimido-1-methylethyl)benzene

m-phenylene-bis(2-propylcarbodiimide) repeat · Picassian XL-732 / Carbodilite E-02 type

What this is

The room-temperature crosslinker in kit BP-PUD-1. The film is a soft anionic aliphatic polyester polyurethane dispersion. This drawing is the polycarbodiimide repeat that ties that film to wool carboxyl groups.

How to read it

Blue = carbodiimide (N=C=N), the group that adds to carboxyl on wool keratin. The aromatic ring is meta-substituted. Each arm is a gem-dimethyl spacer from m-TMXDI.

SMILES (Scout)

```
CC(C)(N=C=N)C1=CC=CC
```

```
(C(C)(C)N=C=N)=C1
```

What it is not

Not BP-CA-1 (ethyl 2-cyanoacrylate). Not BP-DA-1 (MDI / furfurylamine). Not a peptide, catechol, or tissue adhesive. Wool here is a fiber substrate.
